Marviray Manor and Downtown Area Lead Water Service Replacement

Construction of the Marviray Manor and Downtown Area Lead Water Service Replacement project is being financed by the Drinking Water State Revolving Fund (SRF). The SRF program is administered by the Illinois Environmental Protection Agency and receives a portion of its money to fund these types of projects from the U.S. Environmental Protection Agency. This project includes replacing the lead water service lines from the water main to the water meter. Once complete, it will improve water quality for area residents in Montgomery by removing a possible source of lead in drinking water. SRF programs operate in each state to provide communities the resources necessary to build, maintain, and improve the infrastructure that protects one of our most valuable resources: water.
